MESSAGE

I am happy to note that Department of Agriculture & Farmers' Empowerment is bringing out its annual publication, "Odisha Agriculture Statistics, 2023-24". Policy decisions should always be based on relevant and transparent data and careful statistical analysis. This book is quite resourceful containing wide range of granular data relating to various sequential aspects of agriculture sector.

The keen interest of the Principal Secretary, Dr. Arabinda Kumar Padhee, IAS and sincere efforts of the Ex-Director, Sri Prem Chandra Chaudhary, IAS and team in systematically compiling the data and presenting analytical insights has made this publication stand apart from earlier ones.

I hope the Department shall continue its pursuit of data driven approach to empower the farmers, and take the State's agriculture sector forward. I hope this book will be valuable to policymakers, academics, researchers, and others interested in Agriculture Statistics of the State.

FOREWORD

It is heartening to note that Director of Agriculture & Food Production, Odisha has re-initiated the publication of “Odisha Agriculture Statistics” which is the mirror of agricultural activities of the State.

Statistical information *per se* is the most crucial input for policy planning, enabling informed decision-making and effective implementation of agricultural schemes and programs. Accurate and reliable agricultural statistics provide a solid foundation for policy decisions. They also help track progress and identify areas of improvement.

The painstaking effort made by colleagues of the Department of Agriculture & Farmers' Empowerment in bringing out this book is praise worthy. I would like to place on record my appreciation to the Additional Director- Agriculture, Dr. Rajesh Das and the Deputy Director- Statistics, Dr. Sujata Priyambada Parida for their personal contributions in shaping this volume.

I am hopeful that the students, academicians, researchers, policy makers and other interested persons will find “Odisha Agriculture Statistics, 2023-24” quite resourceful.

(Dr. Arabinda Kumar Padhee)

INTRODUCTION

Agriculture is the backbone of Odisha's economy, with approximately 60% of the state's population depending on it for their livelihood. Spanning a geographical area of 1,55,707 sq. km, Odisha is divided into ten agro-climatic zones and features eight soil types. The state is also endowed with a 480 km-long coastline and holds about 11% of India's total water resources. Due to its diverse climate and soil conditions, Odisha can be considered a "Mini-India."

Of the total geographical area of 155.705 lakh hectares, 61.80 lakh hectares are under cultivation, categorized as highland (47%), medium land (28%), and low land (25%). During the Kharif season, around 65% of the cultivated area is irrigated from various sources; however, climatic variations impact actual utilization. The total paddy cultivation area in Odisha stands at 37.01 lakh hectares, making up about 60% of the total cultivated land.

The farming community is predominantly composed of small and marginal farmers, who account for about 93% of all cultivators. According to the Agricultural Census 2015-16, Odisha had 48.66 lakh operational land holdings covering 46.19 lakh hectares. The state witnessed a decline in operational area from 48.52 lakh hectares in 2011-12 to 46.19 lakh hectares in 2015-16 due to urbanization and the conversion of agricultural land for non-agricultural purposes. Consequently, the average landholding size has decreased to 0.95 hectares.

The Directorate of Agriculture & Food Production, Odisha, compiles the "Odisha Agricultural Statistics," which provides data on climatic factors, crop achievements, utilization of key agricultural inputs, and yield estimates. Rice crop data is collected through the Directorate of Economics and Statistics (DE&S), Odisha, based on EARAS sample surveys. Data on other crops are gathered from the field functionaries of the Directorate of Agriculture & Food Production (DA&FP), Odisha, and the Directorate of Horticulture (DH), Odisha. The state's agricultural performance is compared with national averages using the "Agricultural Statistics at a Glance" report published by the Ministry of Agriculture & Farmers' Welfare, Government of India.

The Odisha Agriculture Statistics 2023-24 report includes key information on land utilization, estimation of area, yield rate, and production of various crops, including cereals,

pulses, oilseeds, fiber crops, vegetables, spices, and condiments. Additionally, it provides insights into rainfall, temperature, humidity, irrigation, crop loss, agro-input usage (seeds, fertilizers, and pesticides), farm mechanization, crop loans, crop insurance, minimum support prices, soil testing, and departmental farm operations..

CLIMATE AND WEATHER

Odisha experiences a tropical climate characterized by high temperatures, high humidity, moderate to high rainfall, and short, mild winters. The state's average annual rainfall is 1,451.2 mm, with most precipitation occurring during the monsoon season (July to September). In 2023, rainfall patterns fluctuated from deficient to excessive. Pre-monsoon rainfall (April-May 2023) exceeded normal levels by 74.5%, while monsoon rainfall (June-September 2023) was 4% below normal. Post-monsoon rainfall (October-December 2023) showed a deficit of 22.1%. Excessive pre-monsoon rains adversely impacted standing summer crops from the previous season. The detailed distribution of rainfall in 2023-24 is presented below

Rainfall pattern of 2023-24 in Odisha

Period	Rainfall in mm		% Deviation from normal
	Normal	Actual	
Summer (Jan-March)	59.8	57.8	-3.3
Pre-monsoon (April-May)	96.4	112.4	+74.5
Monsoon rain (June-September)	1144.3	1098.8	-4.0
June	216.5	159.9	-26.2
July	339.9	317.5	-6.6
August	356.0	300.6	-15.6
September	231.9	320.8	+38.3
Post-monsoon (October-Dec)	150.7	117.5	-22.1
Total	1451.2	1386.5	-4.5

There was inter-district and intra-district variation in rainfall pattern which shows skewed distribution in the year. Excess rainfall was seen in districts like Jharsuguda, Angul, Dhenkanal, Koraput, Subarnapur, Kalahandi, Sambalpur, Bargarh, Keonjhar and Malkangiri whereas deficit rainfall was recorded in other districts. Ganjam district received the lowest rainfall of 930.4 mm.

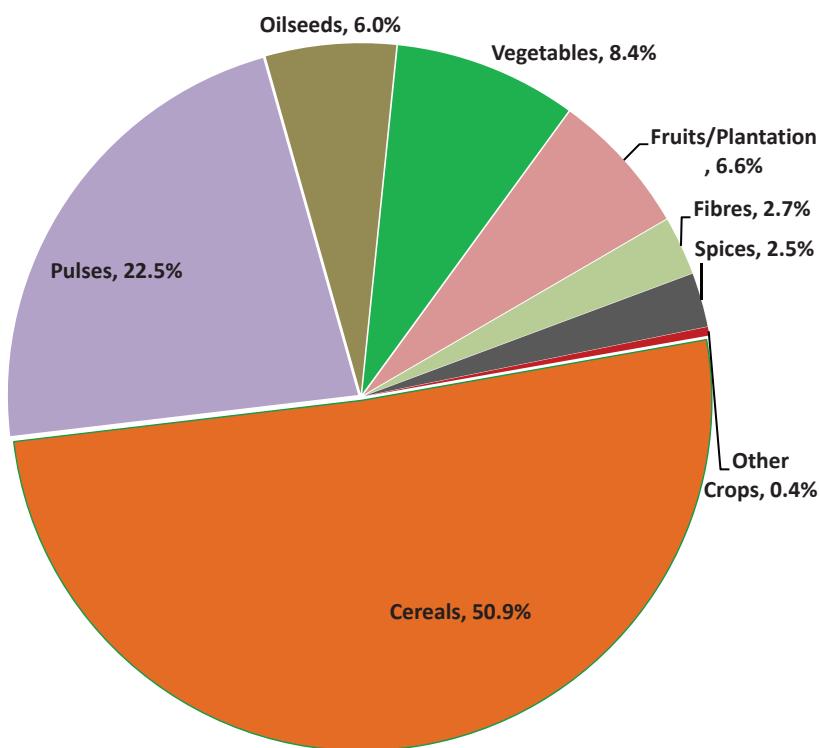

CROP COVERAGE

The gross coverage under different crops in the year 2023-24 was estimated as 91.45 lakh ha out of which the Kharif coverage was 57.46 lakh ha and that of Rabi

coverage was 27.85 lakh ha . Area under fruits and plantation crops was 6.04 lakh ha while flower area was limited to only 8290 ha. Considering the net sown area of 55.93 lakh ha and gross cropped area of 91.44 lakh ha the cropping intensity in the year was 164%. The details of crop coverage are shown in the following table.

Crop Coverage in 2023-24 (In '000 ha)

Commercial floriculture and fruit cultivation have been promoted under NHM and other schemes to increase the farm income of farmers. The area under fruit plantation is 3.69 lakh ha while that of plantation crops is 6.04 lakh ha . The area under floriculture is limited to only 8294 ha. The crop-wise areas are shown in the following table.

GENERAL CROP CONDITION

Excess rain during the pre-monsoon period and deficient rain in post-monsoon affected the Rabi crops. The deficit rainfall in June and August created moisture stress conditions as a result of which the dryland crops were affected. The crop productivity is a function of favourable weather, adoption of technology, crop management practices and use of agro-inputs. Therefore, the unfavourable weather conditions affected the productivity and production of major crops in the state. The total production and productivity of major crops are indicated in the following table.

Area, Production and Yield of Major Crops in 2023-24

(A= Area in '000 ha, P=Production in '000 Mt, Y=Yield in Kg/ha)

IRRIGATION POTENTIAL

Water Resources Department creates irrigation potential through major, medium and minor irrigation projects while other sources are created under RIDF and Jalanidhi Schemes. The irrigation potential so far created in the state is indicated in the following table.

Source-wise irrigation potential created so far (2023-24)

Source of irrigation	Potential for Kharif in '000 ha	Potential for Rabi in '000 ha

The State Govt. provides subsidy to the cultivators for creation of captive irrigation under schemes DBT Jalanidhi Soura Jalanidhi, RIDF- Jalanidhi and sustainable Harnessing of ground water in water deficit areas.

Total	17363	35597.20

Since the net sown area in the state is 55.92 lakh ha it can be concluded that irrigation potential has been created for 39.75% area during Rabi season. Since majority of irrigation sources are rain dependent the actual utilization of irrigation for crop production is less than the potential created. The cropped area under irrigation in the year is presented in the following table.

Crop-wise Irrigated Area in 2023-24 (Area in '000 ha)

CONSUMPTION OF AGRO-INPUTS

Seed is the primary input which is also a carrier of material technology for improved crop production. Improved seeds can increase crop yield by 15-20%. The seed replacement rate (SRR) is a key indicator of agricultural production. Usually the hybrid seeds are changed every year while certified seeds need to be replaced once in 2-3 years. The ideal seed replacement rate for self-pollinated crops is 20-30% every year while cross pollinated seeds need to be replaced by 15-20% every year. Government and private agencies supply seeds to the farmers following the existing Seeds Act and Rules.

The supply of certified seeds during Kharif and Rabi seasons in 2023-24 are indicated in the following table.

CHEMICAL FERTILIZERS

Fertilizer is called the kingpin of crop production. But realizing the adverse effects on sustainable agriculture, official strategy has been tilted towards integrated nutrient management and use of organic manures and biofertilisers. However, soil tested based application of fertilizers in a balanced proportion has been promoted in the state for increasing crop productivity on par with the national average. Usually the ideal ratio of NPK use is 4:2:1 although it is recommended as 2:1:1 for cereals and 1:2:2 for other crops depending on the nutrient status of soil and intended yield target. The following table indicates the consumption of fertilizers in 2023-24 during Kharif and Rabi seasons. The state consumes much less of fertilizer when compared to the national average of 139.8 kg/ha with NPK ratio of 8.72:4.37:1.

Consumption of NPK in 2023-24 in MT

Nutrient	Consumption in MT		
	Kharif	Rabi	Total
Nitrogen	275129	97784	372913
Phosphorus	148286	38335	186621
Potassium	32660	10084	42744
Total (N+P+K)	456075	146203	602278
Consumption/ha in kg	79.37	52.49	70.59
Ratio of N:P:K			8.72:4.37:1

Soil Health Card Scheme is in operation in the state. Against the target of analysing 5,70,000 soil samples and distribution of soil health card the achievement was 5,34,454.

PESTICIDES

The state has adopted integrated pest management strategy to limit the pest attack in all crops. Since the tropical climate and humidity favours the multiplication of insect pests and disease pathogens a strict surveillance is undertaken to study the activities of notorious pests and decide the course of action to manage the pests. The sole reliance of synthetic pesticides and herbicides has not been advocated and the pest control strategy follows the IPM strategy. Therefore consumption of pesticides is declining in the state. The following table gives a picture of pesticide consumption in the state during the reporting year.

Consumption of pesticides in 2023-24

FARM MECHANISATION

Timely land preparation and other agricultural operation along with drudgery reduction by using labour saving machinery and equipment has been incentivized in the state to boost agricultural production. However, attention has been made so that the equipment will not displace the farm animals. The farm machinery supplied during the year is given in the following table.

CROP INSURANCE

The state is vulnerable to frequent natural calamities which usually occurs once in every three years. However, there are cases of occurrence of calamities like drought & flood in the same year. In order to provide a safety net to the farmers to save the crops from the clutches of natural calamities PMFBY is implemented in the state. Both loanee and nonloanee farmers get the benefit of crop insurance. The achievement made in this sector during the reporting year is given in the following table.

Particulars	Kharif	Rabi	Total

PROCUREMENT OF FARM PRODUCE UNDER MSP

In order to increase the farmer income, minimum support price of 23 agricultural produces is announced before the sowing season. The MSP is hiked by the GOI every year which is not less than the price suggested by NCF, 2006. Procurement of paddy, millets and pulses is made by the Supply Department and NAFED at designated locations. The total paddy procurement was 75.88 lakh tons in the year 2023-24 through 2611 PACSs, 625 WSHGs and 6 PPs. The procurement of other agricultural produce in 2023-24 is indicated in the following table. Seed cotton has been procured by CCI and Pvt agencies to the tune of 510057.74 quintal from eight districts.

2. ESTIMATES AND TERMINOLOGY OF DIFFERENT SURVEYS USED IN AGRICULTURE SECTOR AS MAJOR INDICATORS OF THE DEVELOPMENT

In Statistical Systems, different surveys are carried out by Central and State Govt with Specific Interval.

- i. Agriculture Census by Economics and Statistics Division of MoA & FW, Gol. It is the survey which provides size category wise ,tenancy status wise number of operational holdings in the State.
- ii. Periodic Labour Force Participation Survey by MoSPI, Govt of India. It provides LFPR, WPR and UR for different sectors including Agriculture.
- iii. Situation Assessment Survey of Agricultural Households by NSO, MoSPI, Gol. It provides average monthly income of Agricultural Households (Farmers' Household)

2.1. AGRICULTURE CENSUS (2015-16)

(The latest census was for 2022-23 but the results are not published yet.)

Operational Holdings: All land which is used wholly or partly for agricultural production and is operated as single technical unit* by one person alone or with others without regard to the title , legal form and size or location.

(*Technical Unit: It is the unit under the same management and has the same means of production such as labour force, machineries and other such input)

2.2. PERIODIC LABOUR FORCE SURVEY (PLFS)

It has the major objectives for measurement of employment and unemployment. The first was to measure the dynamics in labour force participation and employment status.

Work Force: The workforce in the usual status (ps+ss) is obtained by considering the usual principal status and the subsidiary status together. The workforce in the usual status (ps+ss) includes

- a. The persons who worked for a relatively long part of the 365 days preceding the date of survey and
- b. The persons from among the remaining population who had worked at least for 30 days during the reference period of 365 days preceding the date of survey.

The workforce measured in current weekly status (CWS) gives the average picture of the workforce in a short period of one week during the survey period.

- a. The estimate of workforce in the current weekly status is derived considering those who worked for at least 1 hour on any day during the 7 days preceding the date of survey.

Worker Population Ratio (WPR): It is the percentage of persons employed among the persons in the population.

2.3 SITUATION ASSESSMENT SURVEY OF AGRICULTURAL HOUSEHOLD 2019 (SAS-2019, NSS 77TH ROUND)

Agricultural Households (Definition):

A household can be termed as one agricultural household if at least one member of the household is self-employed in agricultural and allied activities and value of the agricultural produces is at least Rs 4000/- in a year. The reference period of the survey was Agricultural Year 2018-19 (July 2018-June 2019)

2.4. TENANCY STATISTICS (LEASED-IN HOLDING STATISTICS) OF THE STATE

2.4.1 SOURCE : AGRICULTURE CENSUS 2015-16

Leased-in holdings

When any land taken on lease from a land owner for the purpose of agriculture and allied activities on a consideration in cash or kind or both as per their mutual agreement without any permanent right of possession, the respective tenancy category is called as lease-in tenancy holdings.

- As per Agriculture Census 2015-16, About 9.05 lakh operational holdings are of “leased in” tenancy status i.e. about 18.6% of total operational holdings are of “leased in” tenancy status. Out of which 2.83 lakh holdings are of wholly leased in and 6.22 lakh such units are of partly leased in and other-wise possessed.
- About 9.14 lakh ha. Operational Area i.e. about 19.8% of total operational area are being operated in “leased in” tenancy.
- Out of total leased in Operational Holdings about 93.2% are of marginal and small cultivators.

2.4.2. SOURCE: SITUATION ASSESSMENT SURVEY OF AGRICULTURAL HOUSEHOLDS 2019

Leased-Out Land

Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title is defined as land leased out.

Leased-in land

It is defined as land leased in if it is taken by household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral. If the lease contract is written, then it is considered as recorded lease and if the lease contract is oral then it is considered as non-recorded lease.

The survey collected information on the land leased-out and leased-in by the rural households. The extent of tenancy in rural India as estimated from the surveyed households of visit-1 and visit-2 during the two halves of the agricultural year 2018-19 are respectively.

Notes:

- 1 The figures for India and Manipur, include by sex, the estimated population, 0-6 population and literates of Paomata, Mao Maram and Purul Sub-division of Senapati district of Manipur for Census 2001 and 2011.
- 2 For working out density of India and the State of Jammu & Kashmir, the entire area and population of those portions of Jammu & Kashmir which are under illegal occupation of Pakistan and China have not been taken into account.
- 3 The 1981 Census could not be held owing to disturbed conditions prevailing in Assam. Hence the population figures for 1981 of Assam have been worked out by 'Interpolation'.
- 4 The 1991 Census was not held in Jammu & Kashmir. Hence the population figures for 1991 of Jammu & Kashmir have been worked out by 'Interpolation'.
- 5 The names of Uttaranchal and Pondicherry have been changed to Uttarakhand and Puducherry respectively after Census-2001.
